DBUH200(Ka)

Dual, 'Hot-swap', Ka-Band Block Converter with optional 1+1 Redundancy

The 19-inch 1U rack mounted **DBUH200(Ka)** chassis unit is designed to accept any mix of two of the converter modules shown below. Modules can be inserted/ replaced in the **DBUH200(Ka)** unit from the rear without the need to remove power or disturb the other channel in any way.

The unit incorporates a graphics display module, membrane keyboard and features a clear and intuitive control and configuration menu fully utilising the unique graphics display.

The **DBUH200(Ka)** chassis units are mains powered (redundant power supplies as standard) and are constructed of high-grade components to give the ultimate stability, ripple and phase noise performance.

The **DBUH200(Ka)** unit is available with optional integral 1+1 redundancy switching and control for use when two identical modules are used.

The unit has a highly stable internal reference source and will automatically detect and lock to an external 10MHz signal, when applied.
