

### **IBDH(Ka) Series**

Ka-Band, Single-Channel, Multi-Channel & Multi-Range, Rack Mount, Block Down Converters with full user interface and remote control.

The 19-inch 1U rack mounted IBDH(Ka) series of block frequency down converter units from Peak Communications are designed to take the incoming SHF signal and produce an output at L-Band that is suitable for direct connection to an L-band demodulator or for further conversion typically by a P7001 synthesised down converter.

The IBDH(Ka) series of units are mains powered and are constructed of high-grade components to give the ultimate performance.

For redundancy the IBDH(Ka) uses a simple CANBUS<sub>®</sub> interface and has an integral redundancy controller for 1+1 & 2+1 operation (for use with external R1000HH(Ka), R2000HH(Ka) switch units), also compatible with the RCUH100/ RCUH200 series 1+1/2+1 redundancy controllers. For N+1 systems the RCU1002(Ka) series is offered.

The unit incorporates a graphics display module, membrane keyboard and features a clear and intuitive control and configuration menu fully utilising the unique graphics display.

The unit has a highly stable internal reference source and will automatically detect and lock to an external 10MHz signal, when applied.

#### **Peak Features**

High stability, low ripple and excellent phase noise
 10MHz external reference fitted as standard with automatic internal reference back-up
 Electronically variable attenuator option for both local & remote control of gain
 Integral 1+1 & 2+1 CANBUS<sub>®</sub> redundancy control & N+1 switch systems available
 L-Band monitor and fibre optic L-Band interface options available
 Available in dual, triple & quad-channel versions
