PBD(A) Series

Single-Range, C, X & Ku-Band, Remote Mounted, Block Down Converters

The **PBD(A) series** remote mounted, block down converter units from Peak Communications are designed to be fully compatible with a wide range of L-Band modulators and frequency converters. This high-grade range of **PBD(A)** outdoor units will accept the SHF input from an LNA system and provide a frequency conversion to L-Band.

The **PBD(A) series** utilise externally phase locked dielectric resonator oscillators (XPDROs) and are far superior in stability and phase noise to voltage-controlled oscillators (VCOs), as commonly used in other BDC designs. High rejection performance filtering techniques are employed to ensure unrivalled spurious response.

For supply, the units accept a wide range of DC voltages. They can be offered with the remote mounted **OPS series** AC to DC PSU's, alternatively the **D400** rack mounted DC & reference driver units are available.

For 1+1 & 2+1 redundancy, two configurations are available;
a/ rack mounted **RCU50 /RCUH50** redundancy controllers (with L-Band switching) are offered, along with options for outdoor weatherproof SHF switching units and PBD unit DC & reference drive capability.
b/ a complete 'outdoor solution' comprising remote mounted **R1000HR /R2000HR** switching units with direct redundancy control via IP (requires PBD units to be fitted with Ethernet option).

The unit has a highly stable internal reference source and will automatically detect and lock to an external 10MHz signal, when applied.
